SKILLS SUMMARY

- Languages: TypeScript, JavaScript, Python, C++
- Frameworks: React, Vue.js, Django, FastAPI, Node.js, Express, Redux
- Databases: PostgreSQL, MySQL, MongoDB, Firebase
- Cloud & DevOps: Docker, AWS, Azure Application Insights
- Testing & Tools: Git, REST APIs, Pytest, Vitest, Postman, JMeter, SQL Migrations

EDUCATION

- Swinburne University of Technology (Vietnam)
- Bachelor of Computer Science Expected 2026
- GPA: 3.1 / 4.0
- Relevant Coursework: Software Architecture, AI Systems, Web Development

CERTIFICATES

- AWS Academy Graduate - Cloud Architecting - Training Badge 24/8/2024
- AWS Academy Graduate - Cloud Foundations - Training Badge 24/8/2024
- EdX Cs50x Harvard 11/2025

NGUYỄN HOÀNG MINH

CAREER OBJECTIVE

Seeking to grow as a software developer by contributing to modern, scalable web applications that solve real-world problems and create user value.

PROJECTS

Start-Up Bakery Management System

<https://github.com/nminh2209/HomeBakeryvite>

Van Ngoc's Bakery || July 2025 - present

- Architected full-stack bakery management platform with product, CRM, inventory, and order management modules using React 19, TypeScript, Ant Design, and Firebase
- Engineered dynamic pricing, ingredient tracking, purchase workflows, and sales analytics to automate core business operations
- Delivered fully localized, responsive UI with real-time synchronization optimized for Vietnamese users

HMU - Medical Student Documentation Web Application

Capstone Project || Backend Developer || Vice Project Manager

- Owned 38% of commits (179 commits) and architected 7 Django applications as primary backend developer for Hanoi Medical University's clinical case platform
- Designed and built core models, serializers, views, and PostgreSQL schema for clinical cases, grading, real-time notifications, and exports
- Developed multi-step case creation wizard, PDF/Word export system, grade claim feature, and VietOCR integration with fallback
- Implemented Docker setup, database scripts, Pytest/Vitest testing, and resolved multiple frontend-backend mismatches and environment issues

EXPERIENCES:

Fresher Software Engineer

MindX - CRM Platform || November 2025 - January 2026

- Architected Azure Application Insights monitoring and telemetry for React CRM handling 10K+ daily events
- Enhanced reliability across Stringee, Bizfly, and OmiCall integrations via structured logging and retry logic
- Resolved lead sync and async task failures using exponential backoff retry mechanisms
- Fixed Vite cache conflicts and TypeScript mismatches to improve development stability

Software Engineering Intern

BlueOC || March 2026 - May 2026

- Built and maintained key features for internal workforce management systems (Timesheet and TopHat LM) using React, TypeScript, Redux, and REST APIs
- Designed and implemented overtime planning, shift management, approval workflows, and RBAC, improving operational efficiency for internal teams
- Developed FastAPI backend scaffolding, database models, API endpoints, and unit tests for OTA platform, accelerating feature delivery
- Actively participated in GitHub PR reviews, Docker workflows, SQL migrations, and cross-functional collaboration in Agile environment

AI Thực Chiến — VinUniversity / VinAI

VinGroup/VinUni || May 2026 - August 2026

- Selected for an intensive AI engineering fellowship focused on applied machine learning, real-world deployment workflows, and industry-led technical projects.
