SKILLS SUMMARY

- Programming Languages: TypeScript, Python, C++, JavaScript
- Frameworks & Libraries: React, Vue.js, Node.js, Express
- Databases: MongoDB, MySQL
- Tools & Technologies: Git, Docker, AWS, RESTful APIs
- Other Skills: Agile methodologies, problem-solving, teamwork

EDUCATION

- Swinburne University of Technology (Vietnam)
- Bachelor of Computer Science | Expected 2026
- GPA: 3.1 / 4.0
- Relevant Coursework: Software Architecture, AI Systems, Web Development

CERTIFICATES

- AWS Academy Graduate - Cloud Architecting - Training Badge 24/8/2024
- AWS Academy Graduate - Cloud Foundations - Training Badge 24/8/2024
- EdX Cs50x Harvard 11/2025

NGUYỄN HOÀNG MINH

CAREER OBJECTIVE

Seeking to grow as a software developer by contributing to modern, scalable web applications that solve real-world problems and create user value.

PROJECTS

Start-Up Bakery Management System

<https://github.com/nminh2209/HomeBakeryvite>

Van Ngoc's Bakery || July 2025 - present

- Designed and developed a Vietnamese bakery management platform with product, CRM, inventory, and order management features
- Implemented dynamic pricing, ingredient tracking, purchase workflows, and sales analytics for operational automation
- Built a responsive localized UI using React, TypeScript, Ant Design, and Firebase with real-time synchronization

HMU - Medical Student Documentation Web Application

Capstone Project || Backend Developer || Vice Project Manager

- Developed backend features for a clinical-case learning platform covering patient examinations, diagnoses, management plans, and outcomes
- Debugged and improved serializer, query handling, and annotation logic to increase backend reliability and correctness
- Integrated and tested Vue frontend APIs to ensure accurate rendering of medical and laboratory data

EXPERIENCES:

Fresher Software Engineer

MindX - CRM Platform || November 2025 - January 2026

- Developed monitoring and telemetry workflows for a React-based CRM using Azure Application Insights and retry mechanisms
- Improved debugging and reliability across telecom integrations (Stringee, Bizfly, OmiCall) supporting 10K+ daily events
- Resolved lead synchronization and asynchronous task issues by implementing retry logic and error handling
- Debugged Vite cache conflicts and TypeScript interface mismatches to improve development stability

Software Engineering Intern

BlueOC || March 2026 - May 2026

- Developed and maintained features for internal workforce management systems (Timesheet, TopHat LM) using React, TypeScript, Redux, and REST APIs
- Implemented overtime planning, shift management, approval workflows, RBAC handling, and UI localization improvements across internal applications
- Contributed to a FastAPI-based OTA backend by building core application scaffolding, database models, API endpoints, and unit tests
- Worked with GitHub PR workflows, code reviews, Docker, SQL migrations, and cross-functional collaboration in an enterprise environment

AI Thực Chiến — VinUniversity / VinAI

VinGroup/VinUni || May 2026 - August 2026

- Selected for an intensive AI engineering fellowship focused on applied machine learning, real-world deployment workflows, and industry-led technical projects.
